

Exam Preparation: Artificial Intelligence

Introduction to Artificial Intelligence

- Definition: Simulation of human intelligence processes by machines
- Tasks: Learning, problem-solving, understanding language, decision-making

Applications of AI

- Industries: Healthcare, finance, transportation, entertainment
- Examples: Analyzing medical images, detecting fraud, driving cars, recommending movies

Concerns and Ethics

- Job displacement
- Algorithmic bias
- Privacy issues
- Importance of addressing concerns and using AI ethically and responsibly

Future of AI

- Constant evolution
- Potential for significant changes in the future

Prepare for your exam by reviewing these key points on Artificial Intelligence!
